Evidence Based Investment Decisions for your Orthopedic Services

Dr. Joop Loomans DVM, PhD - Oculus Insights

The diagnostic- and treatment options in equine orthopedics keep expanding as you can witness in this ISELP course. It involves substantial investments in education and equipment. In our short workshop we will help you to step away from the emotional part of investing. We will provide insights and tools for more business oriented decision making that will help you to feel more comfortable with these investments. Also it will help you to price your services well in order to get a financial return for the future of your veterinary business.
